

MINING BITCOIN VS. INVESTING IN BITCOIN

What's The Difference?

When it comes to getting involved in the world of bitcoin, there are two main roads: mining and investing — and they're not the same thing.

Investing in Bitcoin:

Investing is simply buying bitcoin on an exchange like Coinbase or Binance and hoping it increases in value.

- ✓ Quick and easy entry
- ✓ You own the asset outright
- ✗ But you're buying at retail prices, and profit only comes if the price goes up

Key Takeaway:

Investing is a bet on future value. Mining is a business model — you're earning bitcoin consistently regardless of market dips. One is speculation, the other is cash flow.

Mining Bitcoin:

Mining means you're helping power the blockchain network. You're providing computing power to verify transactions, and in return, you're rewarded with newly generated Bitcoin.

- ✓ It's like earning bitcoin at wholesale prices.
- ✓ Passive income potential
- ✓ No need to "buy" the coin — you earn it

Want to start earning bitcoin instead of just buying it? Let's chat.
